

# CRANK child marriage research tracker

This research tracker is a curated resource with details of new and upcoming research by CRANK members. Use it to avoid duplicating research, and to identify priority research areas. It is updated after each CRANK quarterly research meeting.

Organisation	Authors / focal point	Title of study	Brief description	Country/ Region	Link	Duration of study	(Likely) Date of publication	Priority areas: (1)Prevalence, trends, determinants & correlates; (2)Consequences; (3)Intervention effectiveness; (4) Implementaton study; (5) Other
Research submitted up to August 2021								
Human Rights Center, University of California, Berkeley	Julie Freccero	Child marriage in humanitarian crises: Girls and parents speak out on risk and protective factors, decision-making, and solutions	This report shares findings from new participatory research with displaced adolescents and parents in Jordan and Uganda exploring risk and protective factors for child marriage, decision-making, and support needs of girls and their families, as well as strategies and solutions to preventing and responding to child marriage in humanitarian settings. A special report looks at the impact of COVID-19 on child marriage.	Jordan and Uganda	<a href="https://humanrights.berkeley.edu/sites/default/files/publications/child_marriage_in_humanitarian_crises_report_2021.pdf">https://humanrights.berkeley.edu/sites/default/files/publications/child_marriage_in_humanitarian_crises_report_2021.pdf</a>	Jan 2020 - May 2021	May-21	Risk and protective factors, decision-making, and community-driven solutions
More Than Brides Alliance	Jan Apperloo	Making the most of what we know about child marriage and sexuality	Beyond commonly discussed drivers of child marriage such as poverty, insecurity, and lack of education, a significant link to child marriage that has been less explored is how norms and values around the sexuality of girls drive child marriages. The More Than Brides Alliance explored the link between child marriage and sexuality through different lenses. These lenses include (1) the perspective of Girls themselves through youth-led research, (2) communities through participatory learning groups, (3) by interviewing practitioners and (4) by collating these findings with existing research. First results of the project were discussed and deepened during an international learning event in March 2021 with participants across nine countries with high child marriage prevalence. Results of the learning project are shared on the alliance website in different knowledge products. These products introduce how perceptions of marriageability and the risk of pregnancy influence child marriage and analyse common barriers to address sexuality. Beyond highlighting why it is important to address sexuality norms in child marriage, the website provides recommendations for program practitioners. The context-specific dynamics between child marriage and sexuality should influence which kind of activity should be emphasised. For example, in contexts in which pre-marital sex is more common emphasis could be on girl empowerment through SRHR education and services, while in other contexts in which pre-marital sex is less common more emphasis can be placed on mobilising families and communities to change marriageability norms.	Global	<a href="https://morethanbrides.org/mmwk">https://morethanbrides.org/mmwk</a>	Sept 2019 - Sept 2021	Website is already online, all publications are expected to be updated and online by the end of September 2021	Prevalence, trends, determinants & correlates

More Than Brides Alliance	Jan Apperloo	Seeds of transformation for girls' empowerment interventions : What do new findings on girls' agency mean for practitioners in the design and implementation of child marriage programs?	While a body of research on girls' agency questions the conventional child marriage framework and programme interventions designed to empower adolescent girls, so far little light has been shed on the implications of this for the design and implementation of child marriage programmes. As a result, the findings from empirical evidence and the insider viewpoints of girls, parents and other community members, still needs to be picked up by policy makers and practitioners if they are to be factored into post-2020 child marriage programming, a time when numerous global programmes and alliances have ended. To begin this process, this article offers a first step by addressing a core question: What do practitioners need to know about new findings on girls' agency related to sexuality and child marriage and what needs to be considered in the design of new programs and empowerment interventions?	Global	<a href="https://morethanbrides.org/mmwwk/recommendations/">https://morethanbrides.org/mmwwk/recommendations/</a>	Jan 2020 - July 2021	Aug-21	Intervention effectiveness
More Than Brides Alliance	Jan Apperloo	What do we mean by "marriageability" when it comes to child marriage: A proposed framework	This paper lays out a conceptual framework for understanding what factors contribute to notions of "marriageability" in different contexts and how anxieties about marriageability and pressures to marry before marriageability declines operate at different levels, effectively accelerating marriage for girls. We begin by summarising how the term "marriageability" is used in child marriage research and common key strategies in child marriage programming. We then introduce the conceptual framework and explain its various components. We use case studies drawing on qualitative data from India, Niger, Mali and Malawi to illustrate components of marriageability that impact child marriage in each setting, focusing particularly on components related to female adolescent sexuality. Finally, we propose how this framework may be used by programme implementers to identify salient components of marriageability in a given context, to identify target groups who may play a significant role in hastening marriage for girls, and to design strategies aimed at alleviating anxieties related to components of girls marriageability in order to delay marriage and provide more opportunities for girls.	India, Niger, Mali and Malawi	<a href="https://morethanbrides.org/mmwwk/why/">https://morethanbrides.org/mmwwk/why/</a>	Jan 2020 - July 2021	Aug-21	Prevalence, trends, determinants & correlates
More Than Brides Alliance	Jan Apperloo	Working with parents: Refocusing and recalibrating programmatic interventions?	This paper focuses on perhaps the most critical set of actors - parents - to explore how and why they continue to practice early child marriage, despite being aware of its impacts on their children. This exploration begins with highlighting the "voices from the ground" findings from the youth-led research trajectories in five countries and learning exchanges as part of a Learning Fund in nine countries (each of the countries where youth-led research was conducted, plus Bangladesh, Malawi, Niger, and Uganda). The exploration then moves on to an overview of practitioner and programme perspectives on engaging with parents obtained from "implementation experiences" collected through interviews conducted with project staff members in all nine countries. It ends with looking at the possible ways in which engagement with parents on the issue of links between early child marriage and sexuality can be enhanced.	Bangladesh, Malawi, Niger, and Uganda	<a href="https://morethanbrides.org/mmwwk/recommendations/">https://morethanbrides.org/mmwwk/recommendations/</a>	Jan 2020 - July 2021	Sep-21	Intervention effectiveness

More Than Brides Alliance	Jan Apperloo	From part of the problem to part of the solution: Building interventions on existing ways in which communities share information about gender and sexuality.	Although inequitable norms related to gender and sexuality are the primary drivers of child marriage, discussing sexuality within the community is considered taboo in many societies. Existing ways for communities to share information about gender and sexuality with children typically reinforce existing norms and, in turn, child marriage. For example, early marriage might be encouraged to preserve pre-marital virginity, improving a girl's marriageability, or prevent pre-marital pregnancies. Practitioners often perceive the taboo of talking about sexuality and conservative norms as a barrier to interventions. To overcome this obstacle and create a sustainable impact, this article explores how child marriage interventions can build upon traditional ways of sharing knowledge about gender and sexuality while reorienting social norms away from child marriage.	Global	<a href="https://morethanbrides.org/mmwwk/recommendations/">https://morethanbrides.org/mmwwk/recommendations/</a>	Jan 2020 - July 2021	Aug-21	Intervention effectiveness
REAL Centre at the University of Cambridge	Pauline Rose	Transformative political leadership to promote 12 years of quality education for all girls	<p>Education has the ability to empower, inspire and ensure a society that benefits everyone. But too often, girls are being left out of classrooms, and left behind. Today, over 130 million girls around the world are out of school. Even with access to education, many more lack the basics of literacy and numeracy. This problem has a real cost, not only in loss of talent and potential, but also on communities, societies and the global economy.</p> <p>How can political leadership promote 12 years of quality education for all girls? This report from the REAL Centre, University of Cambridge, seeks to answer this question. The study is based on a review of global evidence, with a focus on low-and lower-middle income countries where most action is needed to achieve the world's development goals.</p> <p>Across the world, over 130 million girls are out of school, and over half of all school-aged girls do not achieve minimum proficiency in reading and mathematics, even if they are attending school.</p>	Global	<a href="https://www.educ.cam.ac.uk/centres/real/publications/PoliticalLeadershipPaper_FINAL_With%20Forward_Website.pdf">https://www.educ.cam.ac.uk/centres/real/publications/PoliticalLeadershipPaper_FINAL_With%20Forward_Website.pdf</a>	2019/one year	1 year	Intervention effectiveness
REAL Centre at the University of Cambridge	Pauline Rose	Exploring the school to work transition for adolescent girls	<p>If countries are to grow and prosper in a way that improves the lives of everyone, they need to make a special commitment to supporting marginalised adolescent girls. This includes girls who experience extreme poverty, reside in rural areas, live with disabilities, are affected by conflict or belong to disadvantaged ethnic groups: these girls are among the most vulnerable people in the world and face the greatest risk of being left behind. In terms of the world's development ambitions, they are the least likely to complete primary and secondary schooling (part of Sustainable Development Goal 4, SDG 4) and face the greatest barriers in making the transition from school to decent work (SDG 8). Marginalised adolescent girls should be able to move to livelihood opportunities - formal jobs and informal work and self-employment - that are secure, safe, fulfilling and productive. But most marginalised girls in low- and lower-middle income countries do not have access to education beyond primary school. A combination of low educational opportunities, economic insecurity, vulnerability and exposure to violence, alongside harmful social norms and practices, can hinder girls' transition into a healthy, safe, productive and fulfilling adulthood.</p>	Global	<a href="https://www.educ.cam.ac.uk/centres/real/publications/School%20to%20Work%20Transition%20for%20Adolescent%20Girls%20Full%20Report.pdf">https://www.educ.cam.ac.uk/centres/real/publications/School%20to%20Work%20Transition%20for%20Adolescent%20Girls%20Full%20Report.pdf</a>	2020	Feb-21	Intervention effectiveness

Save the Children	Leslie Archambeault	Ending child marriage in West Africa: Enhancing policy implementation and budgeting	<p>This analysis was created to assess progress on policy implementation and funding for ending child marriage (ECM) in two West African countries, Niger and Sierra Leone following the High-Level Meeting on the Elimination of Child Marriage in 2017. Fieldwork for this research took place in Niger and Sierra Leone between January and August 2020. The focus for the budget analysis is centered around the budget cycles of three ECM-related sector ministries in each country: the ministry in charge of gender and child protection, the ministry of education, and the ministry of public health. The results of this analysis reaffirm the need for high-level decision-makers to create frameworks to generate change in order to end child marriage.</p> <p>Two child-friendly versions of the reports are available in English and French.</p>	West Africa	<a href="https://resourcecentre.savethechildren.net/library/ending-child-marriage-west-africa-enhancing-policy-implementation-and-budgeting-sierra-leone">https://resourcecentre.savethechildren.net/library/ending-child-marriage-west-africa-enhancing-policy-implementation-and-budgeting-sierra-leone</a>	2020	Jan-21	Policy implementation
Save the Children	Leslie Archambeault	Married by Exception: Child marriage policies in the Middle East and North Africa	<p>Legal and policy measures that prevent and prohibit child marriage are a key approach to protecting girls from being married before they are ready. To better understand how child marriage laws protect girls affected by crisis in the Middle East and North Africa (MENA) region, Save the Children undertook comprehensive desk research and consulted with adolescent girls and boys and young adults from refugee and local communities in Egypt, Iraq, Lebanon and Turkey. In April 2021, Save the Children spoke to 123 adolescents and young adults about their knowledge of child marriage laws in their country context, their views on whether these laws help protect girls from child marriage and, if not, what they think needs to change.</p>	MENA	<a href="https://resourcecentre.savethechildren.net/library/married-exception-child-marriage-policies-middle-east-and-north-africa">https://resourcecentre.savethechildren.net/library/married-exception-child-marriage-policies-middle-east-and-north-africa</a>	2021	Jun-21	Intervention effectiveness
Save the Children	Leslie Archambeault	Spotlight Series: Ending child marriage for gender equality	<p>Save the Children's Spotlight series is a collection of country briefings to support national-level advocacy through the latest data and analysis of progress and ongoing barriers. The spotlights seek to include data on drivers, risk factors and consequences of child marriage and other forms of gender-based violence, including data on rates of child marriage, adolescent pregnancy, skilled birth attendance, intimate partner violence, violent discipline and female genital mutilation/cutting (FGM/C) as well as gender inequality index rankings and the impacts of the COVID-19 crisis to-date. Each makes recommendations to governments based on Save the Children's national priorities.</p>	Global	<a href="https://resourcecentre.savethechildren.net/library/spotlight-series-ending-child-marriage-gender-equality">https://resourcecentre.savethechildren.net/library/spotlight-series-ending-child-marriage-gender-equality</a>	Jan-March 2021	Mar-21	Prevalence, trends, and policy analysis

Tariro Youth Development Trust	Samson Muzenda	Gender-based violence and women in artisanal mining in Zimbabwe	This study, conducted by Tariro Youth Development Trust utilises a mixed-methods approach to explore gender-based violence (GBV) experiences of women in artisanal small-scale mining (ASM). The study was conducted in three mining hotspot districts in Zimbabwe. Although the study primarily targeted women, it also involved men to examine the gender norms behind high levels of physical violence, sexual assault, emotional abuse, sexual violence, economic violence, forced labour and maltreatment affecting women and girls in ASM. The study investigated the abuse of power by men in ASM, women's general vulnerability, the harsh nature of the industry, common cultural practices rooted in patriarchy that normalises harmful gender norms as well as the lack of strong laws and policies to protect women and girls at risk of GBV in ASM. The study discovered that people with disabilities who work in the ASM chain are mostly vendors and, only in very rare cases, miners who are involved in manual work. Commercial sex workers, in particular, suffer from all forms of abuse at the hands of men, many of whom are drug abusers. Gold panners (Makorokoza) prey on teenage girls, using money and material things to lure them into having sex. As a result, the rates of child marriage are high in all three of the districts studied. In the face of the persistent economic meltdown and rising poverty levels, women and girls in ASM are trapped in a cycle of hardships and limited choices. Faced with these precarious conditions, patriarchy poses the biggest obstacle for women and girls to effectively exploit and benefit from ASM, the only available means of livelihood.	Zimbabwe	<a href="https://www.alignplatform.org/resources/gender-based-violence-and-women-artisanal-mining-zimbabwe">https://www.alignplatform.org/resources/gender-based-violence-and-women-artisanal-mining-zimbabwe</a>		Jul-21	Other
Unchained At Last	Fraidy Reiss	United States' child marriage problem	The United States has a serious child marriage problem - but a simple solution is available.	United States	<a href="https://www.unchainedatlast.org/united-states-child-marriage-problem-study-findings-april-2021/">https://www.unchainedatlast.org/united-states-child-marriage-problem-study-findings-april-2021/</a>	2021	Apr-21	Prevalence, trends, determinants & correlates
University of Oxford	William Rudgard	Multiple impacts of Ethiopia's Health Extension Programme on adolescent health and wellbeing	In Ethiopia, 50% of the population is younger than 19 years. However, 88% of children and adolescents experience multi-dimensional challenges across nutrition, health and education. Rolled out in 2003, the Ethiopian Government's national Health Extension Programme (HEP) provides key health, sanitation and family planning services to disadvantaged groups. We aim to evaluate the effects of HEP on five dimensions of adolescent development, including teen marriage and teen pregnancy in girls. We will use four rounds of data from the Young Lives older cohort of 1,000 young people between 2000-13. The study exposure is self-reported receipt of HEP following programme rollout in 2003. Outcomes are measured when participants were 19 years.	Ethiopia	<a href="https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3880619">https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3880619</a>	2002-2013	Jul-21	Intervention effectiveness

Research submitted up to March 2021

CARE USA	Pravin,K. et.al. (2020).	Tipping Point Project: Report of the baseline study findings from Bangladesh. CARE USA and icddr,b.	icddr,b, Bangladesh, in collaboration with CARE Bangladesh, is conducting an impact evaluation of the CARE Tipping Point initiative focused on reducing the rates of child early and forced marriage as well as increasing adolescent girls' agency and decision-making power. The evaluation is designed as a three-arm cluster Randomised Control Trial (RCT), using mixed methods to assess girls' agency, relations and the social norms restricting them. The Baseline Report published on the Tipping Point website in 2020, presents findings of this study. In program areas, the majority of girls have accepted gender-inequitable attitudes, including control by their family about their mobility and other aspects of their lives. Girls rarely negotiate marriage, since social norms related to girls' voice and decision-making would lead to girls' opinions being ignored. Girls' interaction with boys outside of their family is also restricted and the result of violating this norm could be early marriage. The study recommends building the girls' movement for collective action in favor of girls' rights and community sensitisation to girls' rights, both of which are important components of the Tipping Point Phase 2 package.	Bangladesh	<a href="https://caretippingpoint.org/phase-2-evaluation-reports/">https://caretippingpoint.org/phase-2-evaluation-reports/</a>	Jan - April 2019	"Peer reviewed publication likely by December 2021"	Intervention effectiveness
CARE USA	Bergenfeld, I. et.al. (2020)	Tipping Point program impact evaluation : Baseline study findings in Nepal	Emory University (USA) and IDA (Nepal), in collaboration with CARE Nepal, is conducting an impact evaluation on the CARE Tipping Point Initiative focused on reducing the rates of child, early and forced marriage and increasing adolescent girls' agency and decision-making power. The evaluation is designed as a three-arm cluster Randomised Control Trial (RCT) using mixed-methods to assess girls' agency, relations and the social norms restricting them. The study found that in programme areas, even girls in school were at risk of being married early if perceived to be disobedient – for example by roaming around their village “without purpose” or interacting with boys. Restrictive norms around girls' mobility, interacting with boys, and participating in leisure activities outside the home intensify during adolescence to guard against expected reputational damage. Norms are somewhat in flux, especially among educated families, but despite this, girls face limitations in their ability to participate in decisions about the timing of marriage and choice of spouse. Collective action among adolescents is in a nascent stage, but there are some adult stakeholders who are committed to supporting such activity.	Nepal	<a href="https://caretippingpoint.org/phase-2-evaluation-reports">https://caretippingpoint.org/phase-2-evaluation-reports</a>	May - July 2019	"Peer reviewed publication likely by December 2021"	Intervention effectiveness
CEFM and Sexuality Programs Working Group- Girls Not Brides	Jacky Repila / Eugenia Lopez Uribe	Tackling the Taboo: Sexuality and gender-transformative programmes to end child, early and forced marriage and unions	Tackling the Taboo focuses on the need to address patriarchal control of adolescent girls' sexuality in the movement to end child, early and forced marriage and unions, and highlights the vital role played by gender-transformative programmes. The report presents findings from a review of 23 organisations that work at the intersection of child marriage and sexuality, and includes three case studies that feature the work of grassroots organisations working in politically and culturally conservative contexts.		<a href="https://www.girlsnotbrides.org/learning-resources/resource-centre/tackling-the-taboo-sexuality-and-gender-transformative-programmes-to-end-child-early-and-forced-marriage-and-unions/">https://www.girlsnotbrides.org/learning-resources/resource-centre/tackling-the-taboo-sexuality-and-gender-transformative-programmes-to-end-child-early-and-forced-marriage-and-unions/</a>		2019	Case studies

Centre for International Health, University of Bergen	Joar Svanemyr	Child marriage and adolescent pregnancies in Malawi. Study on Save the Children's program on preventing child marriages and adolescent pregnancies	Qualitative study on the causes and drivers of child marriage and adolescent pregnancy with a focus on social norms, and on whether the programmatic response from Save the Children is appropriate and effective.	Malawi	Not available yet	Aug 2019 - June 2021	August 2021	Prevalence, trends, determinants & correlates

Zambia	<a href="https://www.tandfonline.com/doi/abs/10.1080/13691058.2019.1621379">https://www.tandfonline.com/doi/abs/10.1080/13691058.2019.1621379</a>	2016-21	2020	Consequences
Flying Broom Women's Communication and Research Association	Sedagül Yavuz	Kızlar Okulda Gelecekleri Güvence	Within the scope of the EU-funded UN Women project "Regional Programme on Ending Violence against Women in the Western Balkans and Turkey," we continue our activities to include the needs of refugee girls. Within this collaboration, since 2018, our association has carried out activities such as mapping child, early and forced marriage (CEFM) in Turkey, and developing advocacy materials, creating a basis for dialogue between the public and civil society, creating shadow reports and establishing national-international partnerships. The project aims to prevent the early and forced marriage of Syrian girls living in Turkey, and to ensure that girls attend school. Through the project, we have reached thousands of people - including Syrian girls, Syrian mothers, Syrian fathers, teachers, psychological councillors, experts working for refugee rights, etc. - through training, workshops, digital activities and social media campaigns. We have conducted workshops on gender, legal mechanisms of CEFM, and preventing discrimination in schools. We have created a bilingual (Turkish and Arabic) website to support girls' education and increase their interests in STEM fields.	Western Balkans and Turkey	<a href="http://kizlarokuldagelecek-kleriguvende.org/">http://kizlarokuldagelecek-kleriguvende.org/</a>	2018 - June 2021	2022	Consequences
GAGE/ODI	Nicola Jones et al. Contact: Kate Pincock	Child marriage risks in the context of COVID-19 in Ethiopia	To explore the short-term effects of the pandemic and resulting policy response on adolescents' risks of child marriage, this policy brief draws on rapid virtual qualitative research from the Gender and Adolescence: Global Evidence (GAGE) longitudinal research sample in the Afar, Amhara and Oromia regions of Ethiopia. A total of 138 adolescent girls and boys aged 13-19 years were interviewed by phone using a semi-structured format in May and June 2020. These were complemented by 31 key informant interviews with officials from the bureaus of health, education and women, children and youth affairs, emergency and food security, and kebele officials in each locality. Our findings highlight that adolescent girls in rural areas and some adolescent boys were and continue to be at heightened risk of child marriage even in the early phases of the COVID-19 pandemic.	Ethiopia	<a href="https://assets.publishing.service.gov.uk/media/5f314dec8fa8f57acac337db/GAGE-Covid-19-Ethiopia-child-marriage.pdf">https://assets.publishing.service.gov.uk/media/5f314dec8fa8f57acac337db/GAGE-Covid-19-Ethiopia-child-marriage.pdf</a>		July 2020	Methodological / measurement

GAGE/ODI	Elizabeth Presler-Marshall et al. Contact: Kate Pincock	"Through their eyes: Exploring the complex drivers of child marriage in humanitarian contexts"	On the anniversary of the refugee compact, a report on child marriage drivers in humanitarian contexts (Middle East and North Africa and Rohingya). This report draws on data collected between 2017 and 2020 as part of the GAGE programme to understand adolescent and parental perspectives on the patterning and drivers of child marriage in humanitarian contexts and to explore options for prevention.	Middle East and North Africa, and Rohingya	<a href="https://www.gage.odi.org/wp-content/uploads/2020/12/Child-marriage-report-final.pdf">https://www.gage.odi.org/wp-content/uploads/2020/12/Child-marriage-report-final.pdf</a>		December 2020	Prevalence, trends, determinants & correlates
GAGE/ODI	Kate Pincock	Experiences of married girls	Report on the experiences of married girls across six capability domains in both developmental and humanitarian contexts. This will include the effects of COVID-19.		Not available yet		2021	Implementation study
Girls Not Brides	Eline Versluys	The impact of COVID-19 on adolescent girls in West Africa and promising practices to improve access to quality education for girls at risk of marriage	This is a desk study looking into the impact of COVID-19 on adolescent girls in Francophone West Africa, as well as a compilation of promising practices to improve access to quality education for girls at risk of child marriage. Practices will be collected from member organisations from both ending child marriage and education coalitions who are participating in Girls Not Brides' Education Out Loud project in West Africa.	West Africa	Not available yet	March 2021-August 2021		Implementation study
<i>Girls Not Brides Rajasthan</i>	Indira Pancholi and Yogesh Vaishnav	"COVID-19 response: Impact on girls. Making their voices heard: A study by Girls Not Brides Rajasthan"	A recent study conducted by Rajasthan Alliance, partners of Girls Not Brides: The Global Partnership to End Child Marriage. This study was conceived and implemented to understand the impact of COVID-19 on the lives of girls in rural Rajasthan, India, with reference to health, education and their dignity of life, particularly in the age group of 15-19 years. It also aimed to elicit adolescent girls' perceptions and aspirations and the call for government and civil society organisations to work for the well-being and protection of their rights. The findings of this research pave the way to a strong advocacy network to raise voices around the concerns of girls, and to work in collaboration to end child marriage and promote girls' education. The research also finds that there are immense possibilities and potential among active girls to talk about their concerns and become activists. The analysis also showed that girls can be involved in the process as change-makers.	Rajasthan, India	TBC		October 2020	Prevalence, trends, determinants & correlates
GreeneWorks	Margaret Greene	Mapping the global evidence on child marriage over two decades: A large-scale systematic scoping review	We conducted a systematic search of publications covering four languages (English, French, Portuguese and Spanish), encompassing a 20-year period (1 January 2000 to 31 December 2019), and including peer-reviewed and grey literature on all geographies. We included peer-reviewed journal articles, reports, dissertations, and other evidence-based materials such as working papers and research briefs. Following the review of 4,081 abstracts, we extracted and analysed data on publication growth and type, geographical patterns, language patterns, focus populations, key sectors, and key areas of child marriage research.	Global	<a href="http://www.greeneworks.com">www.greeneworks.com</a>	Data from 2000-2019, analyses ongoing	September 2021	Prevalence, trends, determinants & correlates

			<p>Our review identified 1,068 publications (58% were peer-reviewed journal articles, 26% reports, and the remaining grey literature. Most publications focused on sub-Saharan Africa (n=335, 31.4%) or South Asia (n=309, 29%) and were published in 2013 or later (n=884, 82.8%). Approximately half (49.1%) of the publications used quantitative methods. Across all study designs, causes and determinants of child marriage and consequences were the most commonly represented domains (41.2% and 37.8%, respectively). Other domains represented included efforts to prevent child marriage (31.8%), followed by prevalence and trends (21.1%). The least represented domain described efforts to respond to the needs of married girls (10.7%).</p> <p>These data permit complex analyses of the growth of the child marriage field over this twenty-year period.</p>					
GreeneWorks	Tara Abularrage	Systematic scoping review on child marriage, 2020	<p>While the prevalence of child marriage has decreased worldwide from one in four girls married a decade ago to approximately one in five today, the practice remains widespread. The United Nations Sustainable Development Goals call for global action to end this human rights violation by 2030. However, if efforts are not accelerated, more than 120 million girls will marry before their eighteenth birthday by 2030. This systematic scoping review of child marriage literature published in 2020 builds on Margaret Greene and Manahil Siddiqi's review of child marriage research from 2000-2019 using an adapted version of their study protocol. The review will evaluate and synthesise the global evidence on child marriage from 2020 and assess where progress has been made, how COVID-19 has impacted rates of child marriage, and where research gaps lie, to inform and shape future research and programme priorities.</p>	Global	<a href="http://www.greeneworks.com">www.greeneworks.com</a>	2020	8 October 2020	Prevalence, trends, determinants & correlates; Consequences
Harvard	Yvette Efevbera; Jacqueline Bhabha	Defining and deconstructing girl child marriage and applications to global public health	<p>Through an extensive review of primary and secondary sources – including legal documents, peer-reviewed articles, books, and grey literature across disciplines – we explore what the term “girl child marriage” means and why it more accurately captures current global efforts than other terms like early, teenage, or adolescent marriage. The lack of harmonised terminology – particularly in global public health – prevents alignment amongst different stakeholders in understanding what the problem is, in order to determine how to measure it and create solutions to address it.</p>		<a href="https://bmcpublichealth.biomedcentral.com/articles/10.1186/s12889-020-09545-0">https://bmcpublichealth.biomedcentral.com/articles/10.1186/s12889-020-09545-0</a>		15 October 2020	Methodological / measurement

International Rescue Committee	Mehreen Jaswal	Formative study: Addressing child marriage in humanitarian contexts	<p>Extension of Girl Shine addressing early marriage in humanitarian contexts. Tools and guidance include curriculum for married/divorced and unmarried girls and their caregivers, outreach strategy, training content (in-person and remote) on Girl Shine and for service providers responding to adolescent girls as well as key messages guidance for broader dissemination.</p>	Uganda, Lebanon	<a href="https://gbvresponders.org/adolescent-girls/girl-shine/">https://gbvresponders.org/adolescent-girls/girl-shine/</a>	2019		Implementation study

McGill University	Alissa Koski	Child marriage in the United States: How common is the practice, and which children are at greatest risk?	<p>Marriage before the age of 18, commonly referred to as child marriage, is legal under varying conditions across the United States. The prevalence of child marriage among recent cohorts is unknown.</p> <p>Methods: American Community Survey data for 2010–14 were used to estimate the average national and state level proportions of children who had ever been married. Prevalence was calculated by gender, race and ethnicity, and birthplace, and the living arrangements of currently married children were examined.</p> <p>Results: Approximately 6.2 of every 1,000 children surveyed had ever been married. Prevalence varied from more than 10 per 1,000 in West Virginia, Hawaii and North Dakota to less than four per 1,000 in Maine, Rhode Island and Wyoming. It was higher among girls than among boys (6.8 vs. 5.7 per 1,000), and was lower among white non-Hispanic children (5.0 per 1,000) than among almost every other racial or ethnic group studied; it was especially high among children of American Indian or Chinese descent (10.3 and 14.2, respectively). Immigrant children were more likely than U.S.-born children to have been married; prevalence among children from Mexico, Central America and the Middle East was 2–4 times that of children born in the United States. Only 20% of married children were living with their spouses; the majority of the rest were living with their parents.</p> <p>Conclusions: Child marriage occurs throughout the country. Research on the social forces that perpetuate child marriage is needed to inform efforts to prevent it.</p>	United States	<a href="https://onlinelibrary.wiley.com/doi/abs/10.1363/psrh.12055">https://onlinelibrary.wiley.com/doi/abs/10.1363/psrh.12055</a>	2010-2014	January 2021	Prevalence, trends, determinants & correlates
McGill University	Alissa Koski	Has child marriage declined in sub-Saharan Africa? An analysis of trends in 31 countries	The study used data from Demographic and Health Surveys in 31 countries to measure trends in child marriage over time.	Sub-Saharan Africa	<a href="https://onlinelibrary.wiley.com/doi/full/10.1111/padr.12035">https://onlinelibrary.wiley.com/doi/full/10.1111/padr.12035</a>	mid 1990s - mid 2010s	-	Prevalence, trends, determinants & correlates
McGill University	Alissa Koski	Child Marriage in Canada	Child marriage, defined as formal or informal marriage before the age of 18, is a globally recognized indicator of gender inequality. Canada has placed itself at the forefront of global efforts to end child marriage as part of its commitment to the United Nations Sustainable Development Goals. Despite these global aspirations, child marriage remains legal throughout Canada. Data from vital statistics agencies and recent censuses indicate that child marriage, although rare, is practiced across the country. In 2016, nearly 2,300 children between 15 and 17 years of age were in union, a prevalence of 0.2 percent. The vast majority (98 percent) of these were informal, common-law unions. Demographic patterns of child marriage in Canada are similar to those observed in many low- and middle-income countries. Girls were far more likely to be married as children than boys and typically wed much older spouses. There were marked differences in the prevalence of child marriage across the country, with the highest estimates found in Alberta, Manitoba, Saskatchewan and the territories. These findings draw attention to the discrepancy between Canada's domestic law and its foreign policy. They also highlight thorny challenges inherent in efforts to end this practice in Canada and elsewhere.	Canada	<a href="https://onlinelibrary.wiley.com/doi/10.1111/padr.12369">https://onlinelibrary.wiley.com/doi/10.1111/padr.12369</a>	2000-2018	December 2020	Prevalence, trends, determinants & correlates

Monash University	Laura Vidal	An examination of the experience of young women impacted by forced marriage in Australia: Experiences of vulnerability and support	This research is an exploration of young women's experiences of forced marriage in Australia. The research is interested in developing an understanding about the context in which forced marriage occurs and the strategies young people adopt when responding to their own or others' situations. The research seeks to inform considerations regarding law and policy responses to forced marriage. Partners for Law in Development	Madhu Mehra	Why girls run away to marry: Adolescent realities and socio-legal responses in India	Based on stories of girls from three cities, this study introduces the issue of self-arranged marriages into the debate on child and early marriage in India. It provides qualitative insights into the contexts within which young relationships develop and are compelled into elopements, and to show how punitive legal responses cause harm to young lives. "The report is fascinating because it highlights some of the most crucial complexities that surround the issue of women's freedoms... it is heart-breaking to read of a 17-year-old girl sent to a remand home and a 19-year-old boy imprisoned merely for the 'crime' of sleeping together or running away to get married." - Vaishna Roy, Journalist (The Hindu, 2019)	India	<a href="https://bit.ly/3qJW9ax">https://bit.ly/3qJW9ax</a>	Cases identified from period 2010-16		Consequences
Partners for Law in Development	Madhu Mehra	Grassroots experience of using the Child Marriage Act, 2006	Based on case studies submitted by 25 organisations, this report aims to comprehend the grassroots experience of what "using the law" means for girls in a position of vulnerability for whom the law is intended, in order to provide them with security and claimant's well-being. Should the attention be fixed on mounting legal sanctions, or focus on interventions to deal with root causes of such vulnerability?		<a href="https://bit.ly/2OrIjN9">https://bit.ly/2OrIjN9</a>	2017-18		Intervention effectiveness
Plan International Asia Regional Office	Rasa Sekulovic	Their time is now: Eliminating child, early and forced marriage in Asia. Integral technical report	Plan International undertook extensive research on the prevalence of child, early and forced marriage (CEFM) in Bangladesh, Cambodia, China, India, Indonesia, Laos, Myanmar, Nepal, Pakistan, the Philippines, Sri Lanka, Thailand, Timor-Leste and Vietnam in late 2017. This technical report provides comprehensive details of CEFM in Asia and further consolidates evidence that governments, universities, civil society organisations, and Plan International have generated over the past ten to fifteen years in the 14 countries that make up Plan International's Asia region. It analyses recent evidence on the prevalence, causes, trends, drivers and impact of CEFM and outlines actions that must be taken to address CEFM in Asia and the strong commitment needed from stakeholders at multiple levels. This full technical report is complemented with a summary report derived from it and publicised under the same title. Plan International & Women's Refugee Commission (WRC)	Alexandra Shaphren; Clare Lofthouse; Katheine Gambir	Understanding the drivers and decision-making pathways of child marriage: A participatory, mixed-methods study in humanitarian settings	We are investigating the drivers and decision-making pathways of child marriage in food insecure areas of Zimbabwe and communities facing conflict, displacement, insecurity, and/or natural hazards settings in the Philippines. The research will help to understand the needs and priorities of adolescents in selected communities with the overall goal of developing a tailored approach to child marriage prevention and response. The research utilises a mixed-methods study design, including key informant interviews, participatory group sessions, and storytelling via SenseMaker®. SenseMaker® is a mixed-method research and analysis tool that allows people to exchange short, open-ended stories about their experiences based on a story prompt. Adolescents (married and unmarried) and people influential in their lives (caregivers, community leaders, religious leaders, etc.) are engaged in study tool development, data analysis, and action planning to inform a child marriage in humanitarian settings program model.	Zimbabwe and Philippines	Forthcoming		September 2021. Data expected to be analysed Q1 2021, tools developed by Q3.	Prevalence, trends, determinants & consequences
Plan International Asia Regional Office	Rasa Sekulovic	Time to act: Accelerating efforts to eliminate child, early and forced marriage in Asia. Emerging effective interventions and strategies	The Time to Act! report was produced with the support of UNFPA APRO and it builds on the previous report Their Time Is Now, providing recent evidence on the prevalence, causes, trends, drivers and impact of child, early and forced marriage (CEFM), and outlines actions that should be taken to prevent and end CEFM in Asia, emphasising the strong commitment needed from stakeholders at multiple levels. The Time to Act! report delves into emerging interventions that have high potential to be successful and effective in preventing, reducing and ending CEFM, and highlights the factors that might lead to success. It also identifies initiatives and innovative approaches that seem most likely to end CEFM if implemented at scale by governments and other relevant stakeholders in Asia and beyond. Extensive document review and interviews with a range of stakeholders were conducted in five focus countries (Bangladesh, Cambodia, India, Indonesia and Vietnam) to identify promising interventions and key success factors, challenges, opportunities and themes.	Asia	<a href="https://plan-international.org/time-act-accelerating-efforts-eliminate-child-early-and-forced-marriage">https://plan-international.org/time-act-accelerating-efforts-eliminate-child-early-and-forced-marriage</a>	2018	7 November 2018	Intervention effectiveness

Plan International Asia Pacific Regional Hub	Rasa Sekulovic	Their time is now - Time to act! Report of the regional comparative analysis of approaches to youth activism and engagement to eliminate child, early and forced marriage in Asia	<p>As part of a multi-phased research series in the countries of South and South East Asia, the recent Time to Act! report (2018) identified youth-led advocacy and activism among the interventions and innovative approaches with a high potential for impact if implemented at scale by governments and other stakeholders. This comparative analysis, Their Time is Now – Time to Act! builds on the report and on previous child, early and forced marriage (CEFM) research studies and focuses on different aspects of youth-led activism, advocacy and engagement to end CEFM in Asia.</p> <p>This comparative analysis aims to systematise the information from 10 Asian countries (Bangladesh, Cambodia, India, Indonesia, Laos, Nepal, the Philippines, Thailand, Timor-Leste and Vietnam) where young people are supported by Plan International in preventing, reducing and ending CEFM. It also provides an analytical overview of the key enablers and barriers encountered by youth advocates.</p> <p>This comparative analysis report presents key findings on structural and functional aspects of the youth groups engaged in ending CEFM , while offering a set of practical recommendations for key stakeholders. It is complemented with a thematic brief, serving to strengthen and further legitimise youth engagement and activism in ending CEFM across Asia.</p>	Asia	<a href="http://www.civilsocietyasia.org/resources/their-time-is-now-time-to-act-report">www.civilsocietyasia.org/resources/their-time-is-now-time-to-act-report</a>	2019	July 2019	Youth activism to end child marriage
Plan International Asia Pacific Regional Hub	Rasa Sekulovic	Their time is now - Time to act! Report of the regional comparative analysis of approaches to youth activism and engagement to eliminate child, early and forced marriage in Asia. Thematic Brief	<p>This thematic brief is derived from a full analysis report under the same main title.</p> <p>Young people’s ideas, solutions and actions to end child, early and forced marriage (CEFM) are gathering considerable momentum across the Asia region. Evidence confirms that when young people are meaningfully involved in messaging and decision-making, real progress towards ending this harmful practice can be achieved.</p> <p>The creativity, boldness and energy that young people are contributing needs to be built upon, scaled up and sustained. Their time is now – Time to act! presents key findings on structural and functional aspects of youth groups engaged in ending CEFM, while offering a set of practical recommendations for key stakeholders.</p>	Asia	<a href="http://www.civilsocietyasia.org/resources/their-time-is-now-time-to-act-brief">www.civilsocietyasia.org/resources/their-time-is-now-time-to-act-brief</a>	2019	July 2019	Thematic brief on youth activism to end child marriage
Population Council	Sajeda Amin	Bangladesh: COVID-19 knowledge, attitudes, practices & needs. Responses from three rounds of data collection among adolescent girls in districts with high rates of child marriage	<p>From 20 to 30 April 2020, during a nationwide lockdown, the Population Council Bangladesh conducted the first round of a rapid phone-based survey on COVID-19 knowledge, attitudes and practices. The survey randomly selected girls who had provided phone numbers during enrollment in a skills-building programme that began before the pandemic. The survey’s objective was to assess the impact of COVID-19 on adolescent lives and to design programs that would contribute to protecting girls and meet social distancing guidelines imposed by the government. Phone interviews were conducted with 479 girls living in the districts of Chapainawabganj, Kushtia, and Sherpur who were participants in a program focused on reducing child marriage by increasing school attendance and grade progression among girls ages 12 to 15. A follow-up survey was conducted from 12 to 22 June 2020, prior to the introduction of virtual skills sessions as school closure and social distancing protocols were in effect. The nationwide lockdown had been withdrawn by that time. A third round of remote data collection took place from 5 to 11 September 2020. This brief presents the findings and comparisons from the three rounds of phone surveys.</p>	Bangladesh	<a href="https://knowledgecommons.popcouncil.org/departments_sbsrpgy/1170/">https://knowledgecommons.popcouncil.org/departments_sbsrpgy/1170/</a>		November 2020	Consequences

Save the Children	Chiara Orlassino	Global girlhood report 2020: How COVID-19 is putting progress in peril	This report looks at 25 years of progress with and for girls and the threats that the COVID-19 crisis now poses to those hard-won gains. It includes new projections based on the economic impact of COVID-19 in 2020, expected to increase the number of girls at risk of child marriage and adolescent pregnancy. This is Save the Children's first adolescent-friendly global flagship report. It was written with input from a girls' advisory group and includes written content, girls' stories, videos, art and poetry in every chapter, as well as recommendations to the global community on how to work with girls to #ProtectaGeneration against the worst impacts of the pandemic. UNHCR	Page Munala		UNHCR mini guide on child marriage				TBC	Prevalence, trends, determinants & correlates

University College London (UCL)	Dr Rochelle Burgess	Mental health consequences of child marriages: A narrative review	<p>This review attempted to answer the following questions: What are the mental health consequences child marriages had on girls and/or boys globally between the year 2000 and 2019? What causes distress in child marriages? And what are the resulting mental health consequences of causes of distress in child marriages?</p> <p>The review included both empirical and non-empirical papers using qualitative and quantitative methods focusing on the implications of child marriages and discussions of the resulting mental health impacts. Studies were included if they discussed mental health of children married or promised in marriage before the age of 18 years. Studies in which children married before reaching 18 years old were part of a larger sample, other populations were only included if their results were presented separately. This review did not limit inclusion based on study design. Studies that reported outcomes regarding child marriages but did not report or discuss any mental health impacts were also excluded.</p>	Global	<a href="https://www.crd.york.ac.uk/prospero/display_record.php?RecordID=139685">https://www.crd.york.ac.uk/prospero/display_record.php?RecordID=139685</a>	May 2019-August 2019	Expected summer 2021	Prevalence, trends, determinants & consequences
University College London (UCL)	Dr Rochelle Burgess	Mapping risk and resilience to mental health consequences of child marriage in Zimbabwe	<p>While the global social justice field works tirelessly to end child marriage, the associated trauma and distress has been widely overlooked and thus we know very little about the mental health consequences of child marriage.</p> <p>This study is the first known study on the mental health consequences of child marriage in the Southern African Development Community. This study will be conducted in Zimbabwe, where 1 in 3 girls are married before the age of 18. Using interviews and conversations with stakeholders in the wider community such as teachers, cultural leaders and health professionals, we will identify the elements which explain how child marriage and the socioeconomic challenges which Zimbabweans face, can affect mental ill-health.</p> <p>Our primary aim is to map and assess pathways of risk, resilience and coping for mental health conditions in families and communities where the occurrence of child marriage is high. This project will allow us to gain a better understanding of how child marriage contributes to poorer mental health outcomes, not only among women and girls, but also their families and wider communities.</p> <p>We will develop locally relevant interventions to prevent and support mental health issues associated with this phenomenon in Zimbabwe, to be piloted and evaluated in future studies.”</p>	Zimbabwe	<a href="https://www.ucl.ac.uk/global-health/research/z-research/march-zim">https://www.ucl.ac.uk/global-health/research/z-research/march-zim</a>	Dec 2020-July 2022	December 2022	Prevalence, trends, determinants & consequences

University College London (UCL)	Dr Rochelle Burgess	Bringing an end to the silence: An investigation into the mental health consequences of child marriage and potential solutions	<p>Background: Despite being a global priority that is covered by Sustainable Development Goal 5 (SDG5) to end all harmful gendered practices by 2030, child, early and forced marriage continues to be a pervasive problem globally.</p> <p>While there is growing evidence on the physical health consequences of child marriage, there is a persistent lack of evidence on the mental health consequences of child marriage. The purpose of this study was to generate consensus and priorities for driving action and response to the under explored topic of mental health impacts of child, early and forced marriage.</p> <p>Methods: This study used the change-oriented Delphi approach to incorporate participatory research methods to draw on community perspectives and expert opinion, to examine the mental health consequences and potential solutions to the problem of child marriage. The study consisted of four stages; a workshop, a focus group in Zimbabwe with child marriage survivors, an online questionnaire with experts in the field, and finally, a follow-up questionnaire. Each stage informed the next. "</p>		<a href="https://www.ucl.ac.uk/global-health/research/z-research/mental-health-and-child-marriage-bringing-end-silence">https://www.ucl.ac.uk/global-health/research/z-research/mental-health-and-child-marriage-bringing-end-silence</a>	Aug 2019-Apr 2021	2017	Prevalence, trends, determinants & correlates
University of Kent & University of Malaya	Amrit Amirapu, Niaz Asadullah, and Zaki Wahhaj	The threat to female adolescent development from COVID-19	We are investigating the effects of the COVID-19 pandemic on the practice of female early marriage in rural Bangladesh by monitoring trends in marriage outcomes. Longitudinal data spanning pre- and post-crisis period is utilised. The key outcome measures used to examine the effects of COVID-19 are: marital status and marriage offers, school enrolment status, intention to return to school after the lockdown, disruption to learning time and self-reported measures of income loss. A telephone survey was conducted during the week of 12-18 June 2020 (Survey on children, early marriage and COVID-19), directed towards 536 women located in 80 villages (from 23 districts) in Bangladesh. The respondents included all women with one or more unmarried daughters aged 9 to 24 years. If additional research funding becomes available, the study set up can be used to further track prevalence, trends, determinants and correlates extending into 2021.		<a href="https://edi.opml.co.uk/resource/the-threat-to-female-adolescent-development-from-covid-19/">https://edi.opml.co.uk/resource/the-threat-to-female-adolescent-development-from-covid-19/</a>		Onoing (a brief is available summarising preliminary findings)	Ethical conduct of research on child marriage
